

Ultherapy™

SEE THE BEAUTY OF SOUND™

An ultrasound treatment to non-invasively lift and sculpt the upper and lower face, neck and décolletage¹

Ultherapy has been tried and tested in over half a million treatments worldwide.² It is the only non-invasive lift cleared by the FDA in the US, and CE mark certified in the EU.^{1,3}

Ultherapy is becoming a popular treatment in many top cosmetic treatment clinics in the UK and Ireland. Quinn Clinics is now proud to offer Ultherapy as part of its range of treatments.

What is Ultherapy?

Ultherapy is a single treatment that delivers focused ultrasound energy deep within the skin. It treats to the same depth as is targeted by surgeons during cosmetic surgery, without injections or damage to the skin surface or surrounding tissue and without patient downtime.⁴

Ultherapy treatment initiates the body's natural response to stimulate the growth of fresh new collagen and elastin to lift and sculpt skin which reduces the signs of ageing.⁵

What is collagen?

Collagen is a naturally occurring protein in our skin that keeps it firm and toned. As we age, collagen also ages and weakens and is less able to support the skin, creating skin "laxity", resulting in signs of ageing such as wrinkles and folds.

A single treatment with lasting results

A single treatment can be used to reduce the signs of ageing in individual areas or the upper and lower face, neck and décolletage. Treatments usually take 30-90 minutes depending on what areas are being treated. Some patients see an initial lift after treatment and further results appear gradually over the next 2-3 months as new collagen builds.^{4,5,6,7,8}

No time out!

Following an Ultherapy treatment, patients can return to normal routine immediately and require no special post treatment care.^{5,9}

Is Ultherapy suitable for you?

Many people want to reduce the signs of ageing and look good for their age. They want the effect of a lift but are not ready for surgery. Ultherapy does not duplicate the results of a surgical facelift but can be used as an alternative, before a facelift or after to sustain lift benefits. It can be used in a treatment plan alone or in combination with injectable treatments.³

Ultherapy is suitable for women and men of all skin tones.^{10,11} Each Ultherapy patient has their treatment tailored to their individual face, neck and décolletage. We would be delighted to discuss with you what potential benefits you could gain from tailored treatment with Ultherapy.⁵

If you experience any side effects, talk to your doctor, pharmacist or nurse. This includes any possible side effects not listed in the package leaflet. You can also report side effects directly via the Yellow Card Scheme at www.mhra.gov.uk/yellowcard
